EJagruti Pune

Jupyter Notebook using VS Code

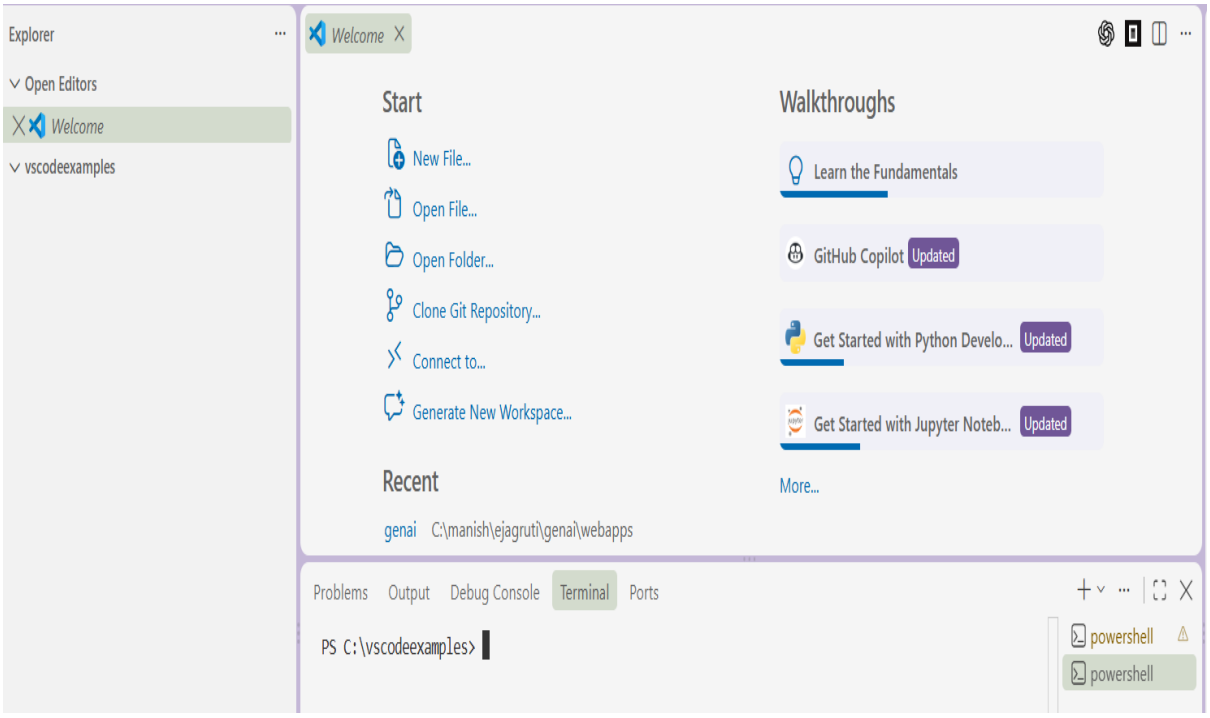

1. Create any folder as per your choice e.g. vscodeexamples

2. Open Visual Studio Code and select the above folder

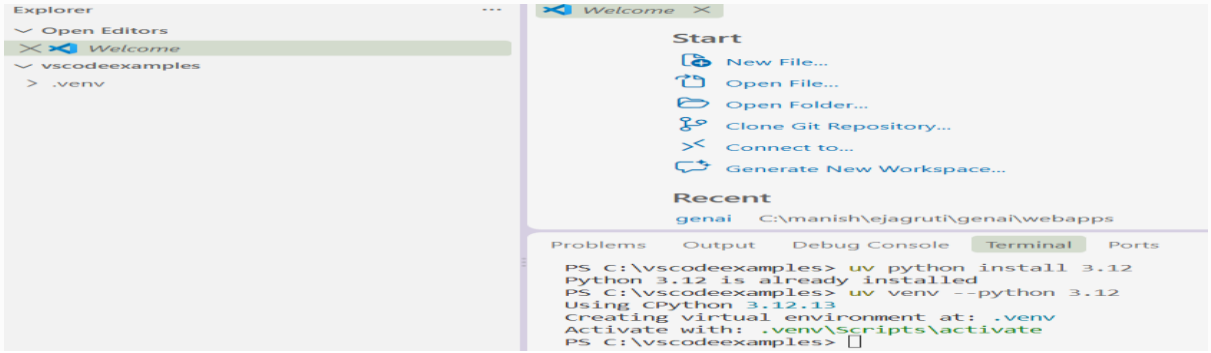

3. Open new PowerShell terminal

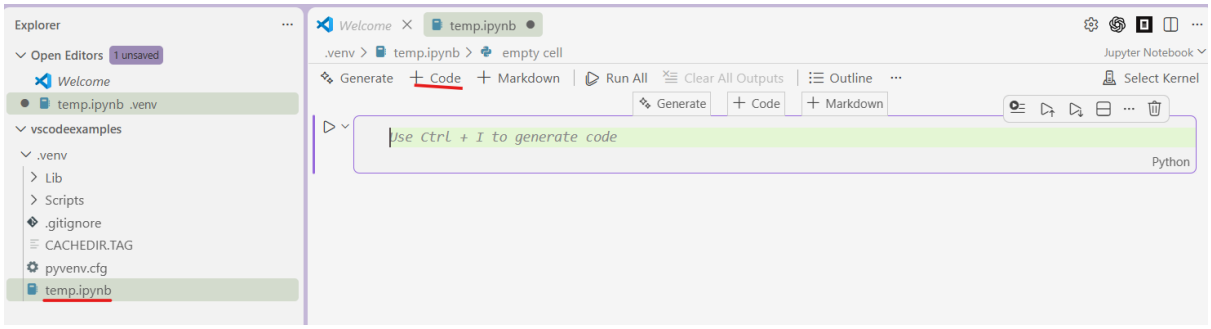

4. Type the below command

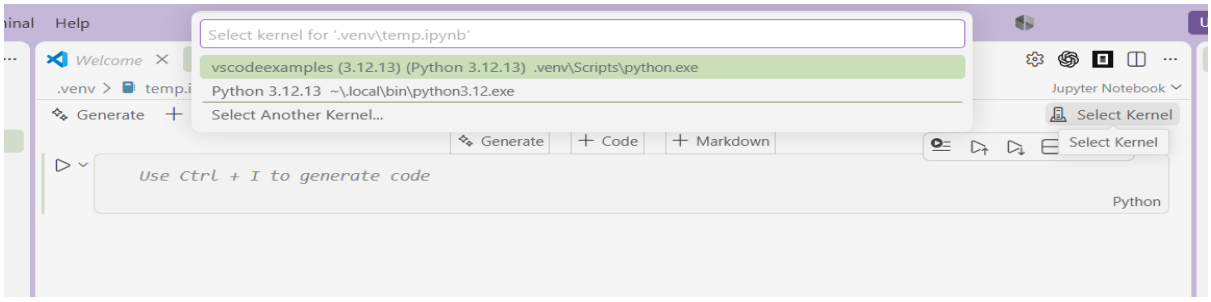

```
>> To install python:  uv python install 3.12
>>  To  create venv: uv venv --python 3.12
>> Install ipkernal: uv pip install ipykernel
```

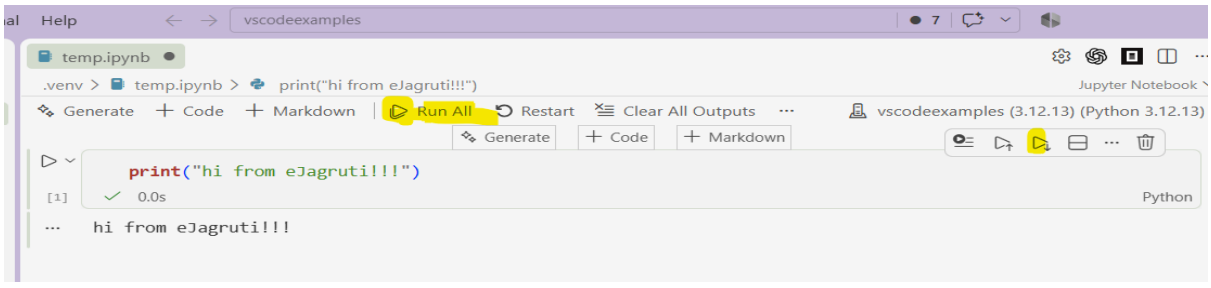

5. Create a temp.ipynb file and click on code

6. Click on Select Kernal to select appropriate kernel

7. Type any python code and run that code

!!!The End!!!
